CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention involves the early diagnosis of cancerous or precancerous conditions in the gastrointestinal tract by detection of a backleak of signature proteins or carbohydrates in a biological sample obtained from the gastrointestinal tract.

SUMM . . . downstream of their secretion, will allow for their chronic leak into the bloodstream, raising their level in serum. Therefore, salivary **amylase** levels in serum have important diagnostic predictive value for esophageal and gastric precancerous conditions, specifically **Barett's** Esophagus, **atrophic gastritis** and **H. pylorii** infection. Serum pepsin levels likewise have diagnostic value in precancerous gastric conditions, such as atrophic gastritis and **H. pylorii** infection.. . .
